Dear Customers:

One of Pennsylvania’s charms is its expression of the four seasons. And at PennDOT that means when we aren’t serving the public during the winter season, we’re preparing for the next round of ice and snow.

We are responsible for 95,616 snow-lane miles across the state – more than all of the New England states combined. We have more than 2,186 department plow trucks at the ready and we employ 4,700 equipment operators to brave the worst of winter to keep our roads passable. They are supplemented by nearly 380 contracted plow trucks and supported by 496 mechanics, managing more than 2,300 snow routes with an average length of 40 snow-lane miles and a three to four-hour cycle time during the average storm.

At PennDOT we’re proud to leverage new and existing technologies to inform the public as well as our operations. Our Automatic Vehicle Location (AVL) data continues providing valuable customer information and also informs our team on our materials and services. We will continue using our innovative system developed with the Pennsylvania Turnpike and the Pennsylvania Emergency Management Agency: 511PAConnect, which can provide updates to travelers through their cell phones on extended highway closures. We will continue collaborating with our partners such as the Federal Highway Administration, other state DOTs and local universities to find the best, safest and most effective winter maintenance strategies.

These details can be found in our Winter Services Guide in the following pages. Please help us by paying attention to winter weather forecasts before traveling, and if you must travel during storms, be prepared with needed supplies in your vehicle and slow down!

Sincerely,

Yassmin Gramian, PE,
PennDOT Secretary
Getting Your Vehicle Ready for Winter - Motorists should ensure that...

- Pre-winter mechanical inspection is completed
- Tires are properly inflated
- Tires have proper tread depth
- Dedicated snow tires for heavy snow areas
- All lights are working
- Your radio is working properly
- Your wipers don’t streak
- Fluid levels are full

Emergency Travel Kit - Don’t Leave Home Without It...

- Warm clothing and gloves
- Blanket
- Ice scraper
- Sand
- Non-perishable food
- Anything else you may need to accommodate family traveling with you
- Special medication
- Baby supplies
- Pet food

Also remember to include warm clothing and gloves, blanket, ice scraper, sand, non-perishable food and anything else you may need to accommodate family traveling with you (special medication, baby supplies, pet food, etc.).
PennDOT Offers
These Winter Driving Tips:

Before You Go
- Prepare a winter emergency travel kit.
- Listen to weather and travel advisories.
- Visit www.511PA.com or call 511.
- Pack a cell phone and be sure it's charged.
- Remove snow and ice from your hood, roof and windows.
- Tell someone where you are going and when you expect to arrive.
- Do not drink and drive and always wear your seat belt.

While You’re Traveling
- Turn on your headlights when your wipers are on - it’s the law.
- Watch for wet-looking roads, they could actually be frozen - “black ice.”
- Use low beams in cases of heavy or blowing snow.
- Do not use cruise control on snow-covered roads.
- Slow down and increase following distance and avoid sudden stops and starts.
- Use extra caution on bridges and ramps where ice can often form without warning.
- Do not pass or get between trucks plowing in a plow line.
- If you do become stranded, it’s recommended that you stay with your vehicle until help arrives. Run the engine every hour or so, but make sure the tailpipe is clear and keep the downwind window cracked open.
- Do not park or abandon your vehicle on snow emergency routes.

Take Special Precautions
Use caution in areas where pedestrians may be present. Anticipate the presence of pedestrians in residential areas. Be alert for people entering the road from behind snow piles. Allow pedestrians extra time to cross icy or snow-covered streets.

Winter Safety Tips for Pedestrians
- Wear brightly colored clothing.
- Stay on sidewalks whenever possible but if you must walk on the road, travel as close to the road shoulder as possible and always walk facing oncoming traffic.
- Allow drivers ample time to stop in icy conditions.
- Before crossing a street, look left, right and then left again to check for traffic.
- Always cross a street at an intersection and avoid entering the road from between parked cars or behind snow piles.
PennDOT Winter Tools and Terms

**Anti-icing** - The application of salt brine to the road surface prior to winter storms. The solution lowers the freezing point of water and slows or prevents ice from forming a bond with the pavement during the early stages of a storm.

**Anti-skid** - Crushed limestone is used as an anti-skid material in addition to salt. The percentage of anti-skid varies by road type.

**De-icing** - The application of salt or salt brine to the roadway after snow or ice accumulation.

**Ground speed-activated salt spreader** - PennDOT trucks are equipped with an electronic material application system that automatically dispenses the desired amount of material. These systems ensure that the material is applied at a constant rate whether the truck is going 15 mph or 45 mph.

**Infrared temperature sensors** – Sensors are mounted on vehicles in the PennDOT fleet to provide the operator with the exact pavement temperature. This helps the operator determine if there is a potential for the roadway to freeze and when to start the treatment cycle.

**Pre-wetted salt** - Road salt is sprayed with salt brine to enhance the salt’s melting capability in cold weather. Pre-wetting lowers the melting point of salt to make it more effective in lower temperatures.

**Salt Brine** - Salt brine is essentially salt water produced at 65 PennDOT facilities around the state. This material is used in anti-icing operations and to pre-wet salt.

**Salt** - Salt remains the department’s primary weapon for fighting winter storms. PennDOT, which has 450 stockpiles around the state, has used an average of nearly 844,000 tons of salt over the last five winters.

**Single, tandem and tri-axle trucks** - Over the past several years, PennDOT has been replacing its single-axle trucks, which are capable of hauling 8 tons of material, with larger and more powerful tandem-axle trucks, which are capable of hauling 16 tons. Tri-axle trucks can haul up to 22 tons.

**Wing plow** - When mounted on both sides of a truck, can allow a truck to clear almost an extra 8 to 9 feet of lane width in addition to the 11 feet or so already cleared by the main plow.

**Tow plow** - Towed by a plow truck and when combined with a front plow, the combination will clear a width of 25 feet or two full lanes.

**Municipal Agreements** - Agreements in place for municipalities to clear state roads in their jurisdiction.
Winter by the Numbers

- 286 Rental Trucks*
- 2,186 PLOW Trucks
- 203 Anti-Icing Units
- 47 Snow Blowers
- 65 Brine Making Facilities
- 655 Municipal Agreements
- 4,700 Operators Includes Anticipated Temporary Operators
- 95,616 Snow Lane Miles
- 529,776 Tons of Anti-Skid Used**
- 8.2 Million Gallons of Salt Brine***
- 844,000 Tons of Salt Used**
- $233 Million Winter Costs**

* Estimated number of rental trucks
** Average amount used over last five winters
*** Amount used 2019-2020 winter
During winter weather, PennDOT’s primary goal is to keep roads **passable and as safe as possible.** Roads **will not be free of ice and snow** while precipitation is falling.

**Storm Management**

Each storm is different and varies, even from region to region. PennDOT staff review weather reports and on the ground conditions to plan how to manage each storm.

In a non-freezing rain storm, department crews may pre-treat with salt brine, essentially a mix of water and salt, from the backs of anti-icing trucks before frozen precipitation starts to fall. While *salt brine isn’t needed for every storm,* when it’s used it helps PennDOT get a jump start on removing ice and snow. Examples of when crews will not pretreat include when a storm is **forecast to start as rain** (rain will wash the material away) or when **there is enough salt residue** from a previous storm.

In addition to storm preparation, how PennDOT uses winter materials during storms **varies by roadway and precipitation type.** On higher-volume roadways, salt is the primary winter material used through a storm, **especially during rush hours and on bridges, hills, curves and intersections.** On lower-volume roadways the amount of salt will be reduced and anti-skid will be used more as **salt is most effective with higher traffic volumes.**

**More Traffic = More Attention from Plows**

---

**Our Plow Trucks Follow Specific Routes**

**The Average PennDOT Plow Route = 40 Miles**
The time it takes for a plow truck to pass by the same point on the route depends on how heavy precipitation is and how much traffic is on the roadway.

Interstates and expressways are PennDOT’s primary focus. In fact, equipment may be redirected to these roads during significant storms.

Under Ideal Conditions in a Low-Accumulation Storm

INTERSTATES & EXPRESSWAYS
Interstates and expressways will see a plow route completed in roughly two hours.

OTHER MAJOR ROUTES
Other major routes or less-traveled state roads may see a plow every three hours.

SECONDARY STATE ROADS
Because trucks are often redirected to higher-priority roads, it can take several hours to complete a route on the lowest-volume roadways.

The **heavier** the traffic or precipitation on a roadway, the **longer** these routes will take.
